WELCOME

Built on decades of edgebanding expertise

Tece Dekor Ltd is a Bulgaria-based edgebanding producer, developed in close collaboration with TECE Turkey. Based in Burgas, we apply the same quality standards and modern production technology to a focused ABS range, built to serve European customers quickly and reliably — with no customs delay for EU deliveries.

ABS is a chlorine-free polymer with the same look and performance furniture makers expect from PVC edgebanding. A UV top coat adds resistance to scratches, solvents, and ultraviolet exposure.

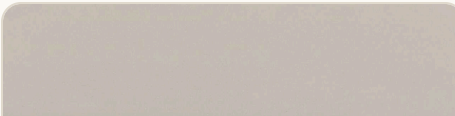

SPECIFICATIONS

Material	ABS (chlorine-free)
Thickness	0.8mm and 1.0mm, fixed per color
Width	Any width, 11–88mm, cut to order
Colors in stock	221 Kronospan-matched
Order size	1 roll to 1,000 rolls
Standard lead time	7 days

ABOUT US · BURGAS, BULGARIA

A Bulgarian edgebanding plant, built with TECE Turkey's standards

Tece Dekor Ltd is an edgebanding producer developed in close collaboration with TECE Turkey, one of the region's most established manufacturers with 38+ years of industry experience.

Our plant sits inside the European Union, so edgebanding ordered anywhere in Europe ships without customs delay, with the same technology and quality standards developed together with TECE Turkey.

WHAT WE STAND FOR

- Consistent color matching against the Kronospan collection your panels already use.
- No minimum-order guesswork. Request the exact width your line needs.
- Direct EU shipping with no customs friction. Free delivery across Europe on orders over €100.

Robotic packaging. Automated warehouse. Live ERP.

01

Robotic packaging

Finished rolls are packed by robotic lines for consistent, damage-free handling before they reach a pallet.

02

Automated warehouse

Stock is tracked and moved automatically, keeping all 221 colors ready to pick and ship.

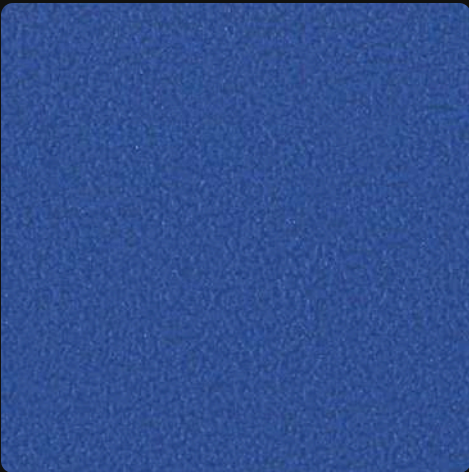

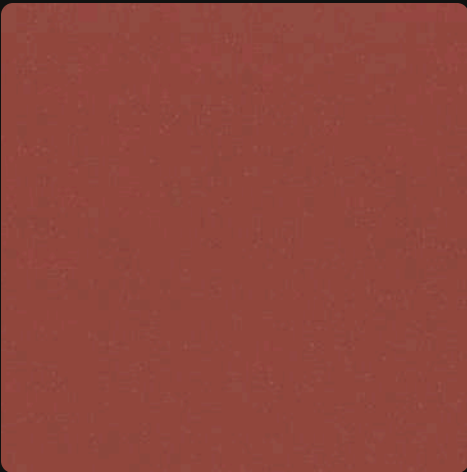

03

Live ERP

Production, stock and dispatch are connected in real time, so requests are matched against current availability.

An official partnership with Kronospan

TECE is Kronospan's authorized edgebanding distributor worldwide. Every color and texture is produced to match Kronospan's own panels, reviewed and approved by Kronospan's team, not reverse-engineered from a swatch.

Approved, not guessed

Reviewed and approved by Kronospan's own staff, not an independent color match.

Four years of production

The complete Kronospan edgebanding collection, with exact color and texture matches.

Global reach

Distributed in over 90 countries, so matched edgebanding is available wherever you are.

KRONOSPAN METAL COLLECTION · BEYOND ABS

A brushed metal & mirror range too

Alongside the ABS catalog, we stock a 8-finish brushed-aluminum and mirror edgebanding range — gold, bronze, copper, platinum, titanium, inox and more — matched to Kronospan's metal collection at 1mm thickness. It pairs naturally with our ABS colors for a hardware-and-trim look, cut to the same 11–88mm width range and shipped the same way.

Width	Any width, 11-88mm, cut to order
Roll length	100 meters per roll
Hot air option	Not available for this range
Standard lead time	7 days

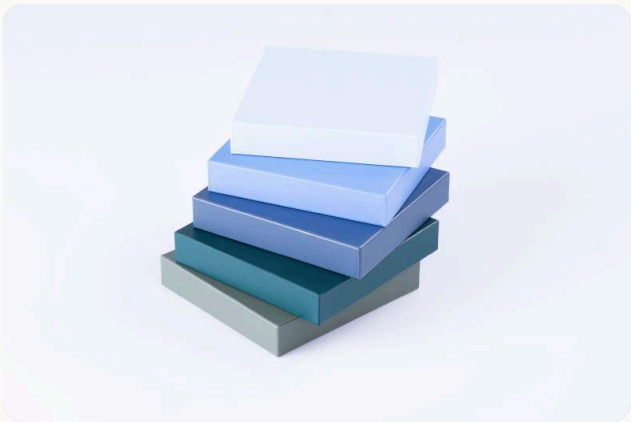

GOOD TO KNOW

Processing needs the right blade

Aluminum edgebanding dulls standard trimming knives faster than ABS or PVC, so processing it well requires knives specifically designed for metal edgebanding. If this is new to your line, it's worth a quick check with your machine specialist before your first run.

Hot air edgebanding: the functional-layer upgrade

Hot air edgebanding adds a reactive functional layer on top of the standard material, engineered to deliver the strongest bond and the cleanest, most invisible glue line when reactivated by a hot-air unit — the near-seamless edge that laser and zero-line finishes are known for.

CONVENTIONAL HOT-MELT

Diagram illustrating conventional hot-melt edgebanding. A tan-colored panel is shown with a dark brown edge. A vertical line labeled "visible glue line" separates the "PANEL" from the "EDGE".

HOT AIR · FUNCTIONAL LAYER

Diagram illustrating hot air edgebanding. A tan-colored panel is shown with a dark brown edge. A vertical line labeled "invisible seam" separates the "PANEL" from the "EDGE". To the right, a wavy line labeled "HOT AIR" indicates the reactivation process.

01

Invisible Seam

The functional layer bonds and reflows under hot air, closing the glue line almost completely for a finish that reads as a single continuous surface.

02

Same Color, Either Way

Available as an add-on to any color already in our ABS catalog — no separate color range to choose from.

03

Made to Order

The functional layer is applied specifically for hot-air-equipped machines, so it's produced per order rather than held as standard stock.

WHAT CHANGES

Same color, thicker material, longer lead time

STANDARD

0.8mm

HOT AIR

1.0mm (+0.2)

LEAD TIME

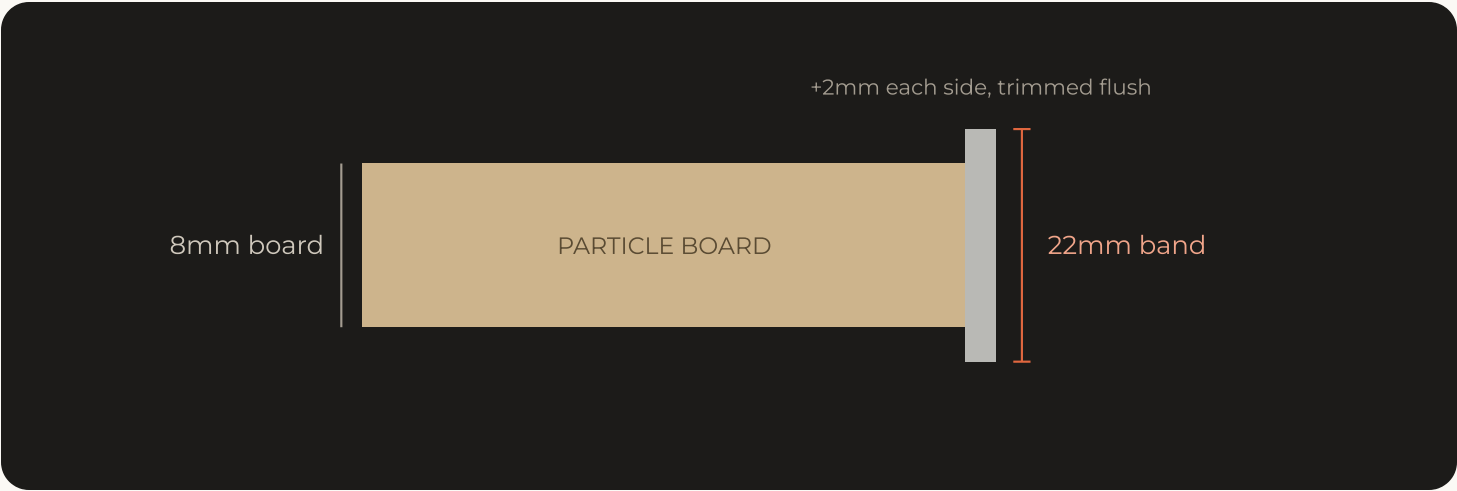

7 days → 3 weeks

Thickness	Base + 0.2mm (0.8 → 1.0mm, 1.0 → 1.2mm)
Width	Any width, 11–88mm, cut to order
Minimum order	14 rolls
Lead time	3 weeks
Available on	Any ABS color — not Metal & Mirror

HOW TO ORDER

Which width do I need?

Edgebanding is ordered slightly wider than the board is thick, so it can be trimmed flush after gluing. Add 2mm on each side: board thickness + 4mm.

BOARD 16MM 20mm	BOARD 18MM 22mm	BOARD 19MM 23mm	BOARD 22MM 26mm
BOARD 25MM 29mm	BOARD 28MM 32mm	BOARD 38MM 42mm	BOARD ANY 11–88mm

ORDER SIZE

- From 1 roll to 1,000 rolls
- Any width, always available
- ABS rolls 150 m

DELIVERY

- Free delivery across Europe over €100
- Made in the EU, no customs delay
- Free samples for trade customers

SAMPLES & QUOTES

Let's talk about your edgebanding needs

Request a color sample or ask about a custom width — From 1 roll to 1,000 rolls, in any width, always available.
